

## Fibre Optic engineer / Projectmanager

### Overview

Ingenieursbureau XYZ is a company of engineers, innovators, and creative people who solve structural challenges. Providing structural engineering services within the mobile telecommunication industry, we engineer solutions that are cost- and resource-efficient and forward-thinking. Founded in 2006, we are headquartered in Arnhem, The Netherlands and Beograd, Serbia and have 20+ professionals working in both offices.

### Description

- The position is full time.
- Developing expansion strategies and concepts.
- Creation of general structural plans for the construction of fibre optic networks.
- Detailed planning and fibre optic route planning of projects. This includes preparation of route safety measures (obtaining permits).
- Review of design, approval and implementation planning. Documentation of planning and construction in GIS and NIS.
- Final project documentation and handover to the client.

### Qualifications

- Experience in the field of fibre optic engineering, you have knowledge of the assembly and civil engineering and can monitor and document the necessary construction work.
- Experience in using documentation tools.
- Good computer skills (MS windows, word and excel).
- Active use of GeoStruct or Autodesk AutoCAD.
- Excellent communication and teamwork skills.
- Good level of spoken and written English.
- Knowledge of the German language is an advantage.

Ingenieursbureau XYZ is an equal opportunity employer and provides all of its employees with a competitive compensation and benefits package.
